Instituto Costarricense del Cemento y de Concreto
Vision

• To be the Costa Rican leader, in the promotion and technical knowledge of cement and concrete, in all its applications; including its positioning, as environmentally sustainable material.
Mission

- Promote the **optimum use of cement and concrete**, through: updating and dissemination of knowledge, advice and cooperation in the planning and execution of **projects**, and innovation.
ICCYC

Values

• Technical Excellence
• Teamwork
• Professional ethics
• Innovation
Technological transfer and capacitation

ACI Certification

ICCYC is an International Partner of ACI, and within that status, we work together in three certification:

a) Concrete Construction Special Inspector
b) Concrete Transportation Construction Inspector
c) Flatwork Finisher and Technician Inspector
ICCYC makes different courses to local governments, as well to construction companies, professionals and students. The courses are of different topics, like concrete mixtures, pathology, pavement design, concrete pipes and concrete sustainability, among others.
ICCYC works with students of different Universities of the Country, **doing research in different topics**, for example: stabilized bases with cement, carbon footprint, recycling of materials for concrete mixtures, and concrete masonry, among others.
ICCYC had been doing manuals and other publications, that we offer to the public:

Guide for Public Space, Concrete pipes, Masonry design (author is Richard Klinger), and others.
Technical Help

ICCYC works with the local governments, and helps them to develop different projects, like community roads in concrete, public spaces, improvement of low income neighborhoods, community water and sewerage facilities.
Through social networks, newsletter, and we communicate and promote concrete and its good use.
Irene Campos Gómez
Executive Director - ICCYC
